Comments on Case 05-M-0090 SBC III

I am in support of the SBC III Residential Programs and would like to see it continue under a 10 year timeframe. As a contractor we are very involved in helping people make their homes more energy efficient, thus, saving money for them and energy for our entire economy.

We work mostly with the residential customer and feel the funding for the residential side should be split at least 50/50 with the commercial side.

As a subsidiary of a Community Action Agency we see a great need for an increase in the funding for the low income families.

A large portion of our residents use natural gas and a program to help them conserve energy would be of great help to this community.

Thank you for your attention in this matter.

Sincerely,

Pete Liberto
Construction Manager
