December 18, 2000

Dear Reader:

The attached report is for November 2000. We are encouraged that each month nearly 2,000 people view our report.

I would like to share with you a question that was asked by one of those readers last month:

- Q.** The graphs located at the end of your report display “Monthly Complaint Rates” and “Year Ending Complaint Rates.” What is the difference and how are the numbers calculated?
- A.** A utility’s monthly complaint rate is calculated by dividing the number of complaints in the reporting month by the number of customers and then dividing that by 100,000. We perform the calculation and create the graph so we can compare the performance of the major companies in an industry while adjusting the effects of the varying customer populations. The year ending complaint rate is calculated by dividing the average number of complaints per month, for the last 12 months, by the number of customers and then dividing that by 100,000. This rate neutralizes any effects of seasonal complaints or anomalies that occasionally occur. The graph allows us to compare “average” performance of the major utilities in an industry.

If you have any questions, you can e-mail barry_bedrosian@dps.state.ny.us or me, catherine_black@dps.state.ny.us.

Sincerely,

Catherine W. Black
Director
Office of Consumer Services

Complaint Trend Summary November 2000

Energy

The total year-to-date (Y-T-D) volume has continued to decline for most energy companies. Niagara Mohawk had a 51% decrease in the most recent Y-T-D period compared to the same period last year. The most significant decline has been in customers' ability to reach the company. In February 1999, NIMO implemented a new customer service billing system. Customers immediately began reporting to the PSC their inability to reach the company by telephone. Staff monitored the situation and prompted Niagara Mohawk to supplement its staffing during that transition period. During this same Y-T-D period there also were fewer complaints about meter accuracy, delayed repairs and bills being delayed or not received.

Water

A review of the Y-T-D complaint volume for water companies indicates a 178% increase in Long Island Water's most recent Y-T-D period compared to the same period last year. This is due to a significant increase in complaints from customers about high bills.

Communications

With an increasing demand for high speed Internet service, many customers have been turning to Digital Subscriber Loop service to access the Internet. Obtaining DSL has proven to be problematic for many customers. For one, there are many players involved in deploying DSL service; a LEC, a data LEC (DLEC) and an ISP (Internet service provider) may all be party to successful implementation of a customer's DSL service.

Complaining about DSL has presented unique problems for customers because the service is marketed differently by each company, i.e., each has a different customer contact. Verizon has its own data affiliate and provides its own Internet service or partners with an ISP, who also markets the service. The customer contact could be Verizon, the data affiliate or the ISP. The DLECs also have their own marketing strategies. Customers can order DSL directly from the DLEC, but most just act as a middleman to connect the ISP with the Verizon customer. The ISP does all the customer contact but the DLEC controls all the OSS info for service and repairs. So the customer could complain right to the ISP or directly to the DLEC who must then interface with Verizon. Because Verizon still controls the wires leading into the house, the customer might complain to Verizon. If frustrated enough, the customer could complain to the PSC about all three companies. Another problem is that DSL, up until now, was provided on a separate line that was not assigned a telephone number. Therefore, identification has been a problem.

The Office of Consumer Services began assisting customers with their DSL complaints on September 19, 2000. Since that time we have logged 150 complaints concerning DSL service, of which 132 have been assigned to Verizon. Most of the complaints originated in the 718 area code.

Staff will continue to monitor DSL-related complaints.

What We Heard This Month

Here is a summary of two complaints received during the month, which exemplify the type of contacts handled at the PSC Customer Contact Center.

During November, a residential customer filed a complaint with the PSC about a delay in obtaining DSL service he ordered in June 2000. Before calling the PSC he had asked the company about the delay and was told that there is a problem with his copper line. The company said they didn't have enough copper wire in his area. The customer pointed out that he had had DSL before with another company and there should be no problem. He turned to the PSC for help in expediting his service order.

On November 10th a residential customer, elderly and ill, complained about her telephone service being switched without her authorization, a practice known as slamming. She said that she received a promotional check from the carrier and called the company to state that she did not want to switch her service. The company's representative advised her to return the promotional check, uncashed. Although she returned the check, the company still switched her service. The PSC placed the charges in dispute pending the outcome of the investigation.

November 2000 Informal Hearings, Shared Meter Cases, Appeals and Rehearings

Informal Hearings

As of November 30, 2000 there were 23 complaints in pre-hearing, and 93 hearing cases pending, for a total of 116 cases pending in the unit. Three cases were resolved with pre-hearing mediation. Fifteen cases were closed; four with settlements, one customer withdrew his complaint and 10 cases were closed with written decisions. A synopsis of some of the cases closed during November appears below:

A customer of a phone company has two phone numbers that he wanted to be unpublished. He contended that the utility was selling personal information without his permission, and was blackmailing him by requiring a fee for non-publication. He concluded this because he found personal information about himself published on a number of Internet "white pages-people search" sites, without the utility notifying him or obtaining his written consent. The complainant also argued that as a result of the publishing of his numbers, he received unwanted phone calls and junk mail. He sought to have the utility prohibited from selling a customer's name, address and phone number if the customer does not want them to be sold, and that the utility be directed to institute a process that allows a customer to have his/her personal information removed upon request. In addition the complainant was seeking to have the utility directed to waive the non-publish fee for both of his telephone numbers. The hearing officer directed the utility to offer the complainant the option to change, without charge, either or both existing telephone numbers to new numbers (that may be listed, unlisted or non-published as the complainant chooses); and to credit the monthly fee for non-published service from the date of the determination back to the date the service was initiated.

In another complaint the customer was disputing a charge of \$3,068.00 for unmetered electric service for four houses, which were on one meter. The utility produced a contract signed by the customer establishing his responsibility for the charge until such time as the houses were ready to be separately metered. The hearing officer sustained the charges based upon the terms and conditions of the contract.

Charges for unmetered service were assessed on three accounts in a building owned by the complainant. He claimed that his tenant(s) were responsible for payment of utility charges. The hearing officer found there was no evidence the tenants were liable for the rewiring of the premises to accommodate new meters. Moreover, the leases presented showed the premises leased were for a private house, not a two-family dwelling. Therefore, charges for unmetered service and all accrued late charges were upheld on all of the accounts.

Shared Meter Designee Cases

Under Section 52 of PSL (Shared Meter Law) only the Commission or its Designee can decide certain complaints. The majority of these cases concern the penalty assessed to owners for failure to find and correct instances of shared metering. At the end of November there were 221 shared meter complaints pending, an increase of 16 over the previous month.

Thirty-nine (39) new complaints were received in November, and 20 complaints were closed.

In six of the cases closed, the penalty was cancelled after staff made a finding that the use was minimal under our regulations and in one case the charges were cancelled because the owner requested the investigation. The designee reduced the penalty to the minimum of 25% in eight cases and to 50% in one case and sustained the penalty in one case.

Appeals and Rehearings

At the November 9, 2000 session, the Commission approved two determinations recommended by the Office of Consumer Services. The first determination granted an appeal by Long Island Lighting Company, finding that the utility had given adequate notice in 1988 of the availability of a new multiple dwelling water-heating rate. The second granted an appeal by Con Edison, finding that demand-billed electric customers were not entitled to have bills for periods including an outage reduced on the ground that high demands allegedly resulted from resumption of service following an outage.

During October, two new appeals and one rehearing request were accepted for review. The appeals, both by residential customers, concern alleged high bills from Con Edison for electric service and from NFG for gas service, respectively. The rehearing request seeks reconsideration of a Commission determination that the utility provided adequate notice to existing gas customers when it started offering a new gas interruptible rate.
